ECONOMIC INTELLIGENCE HANDBOOK STATISTICAL SUMMARY

CIA/RR IP-341
(ORR Project 11.1.1)

NOTICE

This compilation was prepared primarily for use in ORR and is not a formal ORR publication. Some of the estimates contained herein have not been reviewed or coordinated in ORR.

FOREWORD

1. Objective and Scope.

The Economic Intelligence Handbook, Statistical Summary is a concise reference work in tabular form designed to supply data pertinent to the analysis and assessment of the economic strength of Soviet Bloc countries, individually and collectively. Ideally such a compilation should contain data pertaining to production, plans, capacity, trade, availability, consumption, inventory, stockpiles, and known reserves. Where the present edition falls short of this objective, it is hoped that missing data may be supplied at a future date. Textual commentary on some of the more important data contained in the present Statistical Summary will be found in the Economic Intelligence Handbook now in preparation.

2. Sources and Reliability.

Unless otherwise indicated, data in this publication are ORR estimates contained in the ORR Estimates File as of 1 April 1953. To provide a central source for up-to-date reference data, ORR analysts contribute all economic estimates to this file as they are made and submit quarterly reports revising or confirming previous estimates. Consequently, such estimates are provisional and subject to change and do not necessarily represent the final position of ORR. Where feasible, estimated ranges of accuracy have been stated in percentage terms. Absence of ranges indicates only that no such assessment of reliability has been made. If practicable, a bibliographical supplement relating to ORR estimates contained in this Statistical Summary will be issued at a later date.

To fill certain gaps in ORR estimates, data available from other sources have been used. CIA has made no attempt to coordinate these data with the originators and has made no evaluation of them. Some obviously are from more reliable sources than others.

3. Boundaries.

Since the Soviet Bloc is relatively new and since significant boundary changes have occurred during the past quarter of a century, comparability of data becomes an important problem in analyzing some time series. Where possible, boundaries have been defined and comparability has been indicated in footnotes to individual tables. The map and territorial changes indicated in the area section (found on pages 1-3) should contribute to the resolution of other questions concerning comparability of data. Apparent discrepancies between officially announced total area figures and those computed on the basis of a summation of territorial changes probably are due to resurveys and to inaccuracy of prewar and wartime reporting.

4. Time Series.

No attempt was made in compiling the present handbook to adjust time series to take account of such problems as homogeneity of product and changes in reporting systems. Any adjustments for such factors known to have been made by analysts originally responsible for the estimates have been indicated in footnotes to individual tables.

5. Rounding.

Data in this report generally have been rounded where rounding would not result in more than a 5-percent difference in the number or in less than two significant figures. The fact that no assessment of the range of accuracy was available for many estimates made determination of the number of genuinely significant figures extremely difficult. Because of this fact and because of limitations of time, data in some tables have not been rounded in accordance with the general policy. More uniform and rigorous rounding procedures are anticipated for future editions of the Economic Intelligence Handbook.

6. Totals.

Totals for the European Satellites and the Soviet Bloc are merely summations of available data. Except in a few clearly indicated cases, no attempt has been made to adjust totals to compensate for gaps in country data. Totals are rounded summations of unrounded data. Hence they will not always agree with the sum of rounded figures appearing under individual country headings.

GLOSSARY OF TERMS AND CONVENTIONS

| | Terms |
|----------------|---|
| Plan | Official plan data, sometimes derived from officially announced planned percentage increases over announced bases. |
| Availability | Stocks on hand plus production and imports minus exports. |
| Consumption | Domestic consumption from stocks, production, and imports. |
| Inventory | Total stocks on hand: that is, operational stocks plus normal and strategic reserves. |
| Known Reserves | Reserves underground or uncut. |
| | Conventions |
| Asterisks | Asterisks designate data taken from non-CIA sources and not evaluated by ORR. |
| Blank Spaces | Blank spaces indicate that data are not available. |
| Underscoring | Underscoring identifies data officially published by Soviet Bloc governments and accepted as estimates by the ORR analysts concerned. |

| 1951 | 22,113,200 h/ | Polish Border | 1480 | Polieh Border | 48 |

This figure does not include the 1,621,000 square miles of Outer Mongolia, separated from China in 1946. If Outer Mongolia is included, the total area of the Bloc is 34,487,000 square kilometers. This figure is for all of China, (see footnote a). The 36,000 square kilometers of Nationalist controlled formoss must be subtracted to obtain a figure for Red China. Red China is estimated at 9,700,000 square kilometers.

<sup>a. 1/
b. Eastern Poland was incorporated into the USSR by a USSR-Polich Treaty of August 1945. This treaty adjusted the line of Russian occupation of 1939, returning the area does not be a party to this agreement.
c. The US Government does not recognize the incorporation of Estonia, Latvia, and Lithuania into the USSR. The Klaipeda Region (Memelland) is now included in the Lithuanian SSR.
d. The Treaty of Peace with Rumania of 1947, signed by the US, confirms the cession of Beesarabia and Northern Bucovina to the USSR.
e. Japan formally renounced title to the Kuril Islande and couthern Sakhalin by the Peace Treaty. These areas are under Soviet administration.
f. Ruthenia (Subcarpathian Ukraine) was incorporated into the USSR as a recult of an agreement between the USSR and Czechoelovakia in June 1945. The US was not a party to this agreement.
g. Kaliningrad Oblact (northern East Pruscia) was placed under the administration of the USSR as a recult of the Fotedam Conference of 1945. In the view of the US Government, final determination of sovereignty cannot be made until there is a Peace Treaty for Germany.
h. Recent correctione in area calculations by Soviet geographere would increase this figure elightly, giving the approximate total land area of the USSR as 22,136,000 square kilometers.</sup>

a. Date of complete Communist control - 1948.

b. Area figure to nearest hundred equare kilometere, 1/2

c. The Treaty of Peace with Hungary of 1947, signed by the US, provides for the cession to Czechoslovakia of a small area south of the Danube near Bratislava.

d. 2/

Date of complete Communist control - 15h7.

Area figure rounded to nearest thousand square kilometers, h/
This figure, the residual area of Poland after the deduction of
the Soviet-occupied territory, is presumably the area occupied by
Germany, including both provinces incorporated into the Reich and
the "General Government" of Poland.

3/ The addition of the postwar territorial gains to the area
explained in footnote c gives an approximate area of 318,000
square kilometers. This discrepancy probably is due to unreliability of wartime figures.
These areas were placed under Polish administration by the Potsdam
Conference of 19h5. In the view of the US Government, final
determination of sovereignty over these areas will not be made
until there is a Peace Treaty for Germany.

a. Date of complete Communist control = 1947.

b. Area figure to nearest thousand square kilometers. 1/2

c. This figure for 1945 represents the rounded figure given for 1937 plue gains and minue lossee. If accurate area data were available for wartine changes, this figure should agree with the official figure for 1948. No territorial changes occurred between 1945 and 1948.

d. 3/

 $\underline{S} \text{-}\underline{E} \text{-}\underline{C} \text{-}\underline{R} \text{-}\underline{E} \text{-}\underline{T}$

a. 6/b. Flannedc. Increased by Supreme Soviet 1.1 billion rubles.

Rumania - 1 leu 0.09

1952. No accurate data are available for Communist China; the above estimates are based on fragmentary data.

c. This figure is the proposed budget.

d. The figure shown is announced military expenditure; the addition of concealed expenditure would result in a substantial increase.

Expenditures by the State Security Authority are included.

f. This figure is not believed to provide for security forces, the air arm, or pre-military organizations.

USSR NATIONAL PRODUCT

a. Includes wheat and rye.

b. 1928-1931, postwar boundaries excepting territories acquired from Czschoslovakia, Germany, Rumania, and Poland; 1935-1952, present boundaries.

Includes Manchuria. The data are for wheat production since no significant amount of rye is grown in China or Manchuria.

d. 1928-1931, prewar boundaries; 1935-1952, present boundaries.

e. 1928-1931, includes Soviet Zons and territories ceded to Poland and the USSR; 1935-1952, Soviet Zons.

f. Albania - 1955; Bulgaria - 1953; Gzechoslovakia - 1953; Hungary - 1951; Poland - 1955; Rumania - 1955.

g. These are inventory figures for all grains.

a. 1928-1945, postwar boundaries excepting territory acquired from Csechoslovakia, Germany, Rumania, and Poland; 1946-1952, present boundaries.

Lincludes Manchuria. The above data are for sweet potatoes. Chinese production of other types is negligible.

1928-1945, present boundaries; 1946-1952, present boundaries.

1928-1945, Soviet Zone plus territories ceded to Poland and the USSR; 1946-1952, Soviet Zone.

1938-1939 average.

1. Planned production for 1951 was 15.5 million metric tons.

2. Csechoslovakia - 1953 7/ ; East Germany, Poland, and Rumania - 1955. 7/

a. Raw value; refined sugar is equal to approximately 90.1 per cent of raw sugar by weight.
b. 1928-1944, includes Estonia, Latrie, Lithuania, and territory acquired from Finland, but does not include territorise acquired after the war from Caschoslovakia, Germany, Rumania, and Foland; 1945-1952, present boundaries.
c. Includes Mannhuria.
d. 1928-1944, prewar boundaries; 1945-1952, present boundaries.
e. 1928-1944, Soviet Zone plus territories ceded to Foland and the USSR; 1945-1952, present boundaries.
f. Planned production was 27,000% metric tons. 8/
h. Flanned production was 27,000% metric tons. 8/
h. Flanned production was 13,000% metric tons. 8/
h. Elanded production was 13,000% metric tons. 8/
bulgaria and Caschoslovakia - 1953 7/; Est Germany and Foland - 1955. 1/
A CIA conversion factor (see footnote a) was applied refined sugar data. 7/
J. As of 31 July 1951, F stockpils of 36,800 metric tone was reported.

a. The table includes basi, veal, pork, lamb, muttom, goat, and buffalo meat but does not include slaughter fats, pork fat cuts, or bacon.
b. 1928-1940, includes Estonia, latvia, and Lithuania; 1941-1952 present boundaries.
c. Manchuria is included but not Outer Mongolia, Sinkiang, Sikang, or Tibet. Production averages for Outer Mongolia were as fellows: prewar 51,000 metric toms; pestwar - 197,000 metric tons. The abrupt changes indicated in the preduction of meat are the result of estimation based on incomplete data. Actual changes occurred more gradually.
d. 1928-1940, prewar Germany minus West Garmany; 1941-1952 East Germany.
o. On a pestwar boundary basis production would have been 3,465,000 metric tons.
f. Includes horsement.
g. East Germany - 1955 7/; Poland - 1955. 7/
h. Summer 1951 to Summer 1952.
i. Includes imports of live snimals from Outer Mongolia.

a. Climed cotton as a percentage of raw cotton averaged 29.33 per cent during the period 1938-19h0. Estimates of raw cotton production for the years 1941-1945 were obtained as follows: known ginned - 29.33; as unknown raw - 100.
b. Flanned production for 1950 was 3.1 million metric tons.
c. Flan data are for the following years: USSR and Rumania - 1955; China and Bulgaria - 1953; Kungery - 1954.

Known Reserves

Planned production of hard coal was 137 millions metric tons. 12/
Planned production was 12 million metric tons.
Planned production quotas for 1951 and 1952 were 20,050,000 and 21,108,000 metric tons, respectively.
Planned production was 3,565,000 metric tons.
Planned production was 86 million metric tons.
China - 1951; Bulgaria - 1953 7/; Czechoslovakia - 1953; East Germany - 1955; Hungary - 1954 7/; Poland - 1955.
1952 imports from China.

^{1.} Offine - 1994; Surgaria - 1992 imports from China. h. 1952 exports to the USSR. i. 1951. 13/ j. 1952. k. 1950, all coal. lh/ l. 1951.

a. Lignite or brown coal historically represents less than 1 per cent of total coal output in Chine. It is included with production of anthracite and bituminous coal, owing to the fragmentary nature of available data pertaining to brown coal extraction.

b. Flanned production of brown coal was 53,500 metric tons. 12/
c. Flanned production was 53,500 metric tons.

d. Flanned production quotas for 1951 and 1952 were 29,000,000 and 31,121,000 metric tons, respectively.
e. Flanned production was 115,126,000* metric tons. 2/
f. Flanned production of lignite and hard coal was 5,700,000* metric tons. 7/
g. Flanned production was 11,100,000 metric tons.
h. Flanned production was 5,1095,000 metric tons.

a. Matural gas excludes shals gas. Reported prewar figures for the USSR in metric tons have been converted to cubic meters on the assumption that 865 cubic meters of gas is equivalent to 1 metric ton of oil in British thermal unit (Etu) content. The Btu content of natural gas is assumed to be 37,958 Btu per cubic meters. These are US factors.

PRODUCTION OF MANUFACTURED GAS .

a. Crude petroleum estimates exclude natural gas liquide and natural gasoline except for the USSR figures for 1945-1950 when small quantities of these products may be included.

b. Manchurian crude oil refining capacity during World War 11 was 296,000* metric tons. 19/
c. Planned production was 35.1 million* metric tons. 12/
d. In addition, natural gas liquids were produced in the following quantities: 1952 - 3 million metric tons; 1951 - 1.5 million metric tons.

c. The Soviet Zone of Austria, in addition, produced a.2 million metric tone.

f. Albania - 1955 20/; Czechoslovakia - 1953 1/; East Germany - 1955, crude and synthetic oil 1/; Hungary - 1954 2/; Poland - 1955 1/ 11/; Rumania - 1955.9/

a. These estimates can be considered as estimates of crude shale oil before refining and, hence, comparable to crude petroleum.

b. There is no production of shale oil in the European Satellites.

c. This figure is the equivalent of 3.9 billion barrels of petroleum.

a. Metal content of Bulgarian ore is believed to be approximately 60 per cent.

b. Czechoslovakian ore is assumed to have a metal content of approximately 33.33 per cent. This assumption was the basis for deriving ore figures from metal content data for the following years: 1928-1929 11/; 1930-1936 21/;1939-1911. 16/

c. Metal content data of Hungarian ore is assumed to be approximately 37 per cent. This assumption was the basis for deriving ore figures from metal content data for the following years: 1928-1929 11/; 1930-1935, 1938-1939 1/; 1911-1911. 16/

6. Polish ore is assumed to have a metal content of approximately 33.33 per cent. This assumption was the basis for deriving ore figures from metal content data for the following years: 1928-1929 17/; 1930-1937 21/

8. Rumanian ore has a metal content of from 30 to 60 per cent. The medium of this range, 15 per cent, was used as the basis for deriving ore figures from metal content data for the following years: 1928-1929 17/; 1930-1937 21/

g. Planned production was 10 million metric tons.

Planned production was 15,0.000* metric tons.

Planned production was 750,000* metric tons.

a. This is based on a consuming population of 20,000,000 people at the US rate of consumption in 1952.

b. Imports from the US were negligible for 1951 and 1952, being limited by US licensing requirements to some gift packages only.

C. West is defined as all countries outside the Soviet Eloc excepting the US. In addition, 15 metric tons of miscellaneous antibiotics were imported from the West.

Data represent oil content of vegetable oil seeds produced. To convert to maximum potential oil production deduct a 20 per cent waste and direct consumption factor from data for the USSR and the European Satellites. A 10 per cent factor should be subtracted from the data for China.

a. Includes butter, beef, lamb, mutton, goat, and pork fats, except where otherwise indicated.

b. Non-creamery butter is not included. 1928-1940, includes Setonia, Latvia, and Litnuania; 1940-1952, postwar boundaries.

c. Includes Manchuria; pork fat only. The abrupt changes indicated in the production of animal fats are the result of estimation based on incomplete data. Actual changes occurred more gradually.

d. 1928-1940, non-West Germany (i.e., 1937 Germany minus West Zone 1951); 1941-1952, Soviet Zone only.

Railroad rail production in the USSR is approximately 85 per cent of total rail production.
This figure is for the pre-World War II period, not necessarily 1938.
Estimated range of accuracy, plus or minus 1 per cent.
Estimated range of accuracy, plus or minus 7 per cent.
Estimated range of accuracy, plus or minus 7 per cent.
Estimated range of accuracy, plus 20 per cent or minus 10 per cent.
The figure for 1936 includes 2,000 metric tone of narrow-gauge rails and 12,000 metric tons of standard-gauge rails; the figure for 1950 represents heavy rail production with some accessories included.
Estimated range of accuracy, plus or minus 10 per cent.
Planned production was 1,350,000 metric tons of rails.
Estimated range of accuracy, plus or minus 2 per cent.
Estimated range of accuracy, plus or minus 2 per cent.
Estimated range of accuracy, plus or minus 8 per cent.

a. Plates and sheets are listed above as a single category because separation is impossible on the basis of available information. Carbon steel plates are considered to be those flat, not-rolled, finished steel products that come within the following dimensional and weight limitations:

0.180 to 0.230 inches thick, at least \$\beta\$ inches wide;

0.230 inches or thicker, at least \$\beta\$ inches wide;

7.53 to 9.62 pounds, at least \$\beta\$ inches wide;

9.62 pounds or heavier, at least \$\beta\$ inches wide.

Sheets are defined as flat rolled material, 3/10 inches or less in thickness and at least \$\beta\$ inches in width.

b. Data are for pre-World War II period, not necessarily 1937.

c. Estimated range of accuracy, plus or minus 1 per cent.

d. Estimated range of accuracy, plus or minus 6 per cent.

e. Estimated range of accuracy, plus or minus 15 per cent.

Estimated range of accuracy, plus or minus 3 per cent.

f. Estimated range of accuracy, plus or minus 3 per cent.

2. Estimated range of accuracy, plus or minus 3 per cent.

3. Estimated range of accuracy, plus or minus 3 per cent.

3. Estimated range of accuracy, plus or minus 3 per cent.

3. Estimated range of accuracy, plus or minus 2 per cent.

3. Estimated range of accuracy, plus or minus 2 per cent.

3. Estimated range of accuracy, plus or minus 2 per cent.

3. Estimated range of accuracy, plus or minus 2 per cent.

- 117 -

Includes Manchuria. 1928-1938. 3/16/

Pigures for 1938-1944. 3/16/

During this period, Hungary held Transylvania (ordinarily part of Rumania) which accounts for the increase in production.

Less than 100 metric tons.

Planned production was 101,000 metric tons.

Planned production for 1950 was 14,000* metric tons. 7/

USSR - annually, current five year plan; Pulgaria - 1953; Czechoslovakia - 1953. Approximately 3,500 metric tons is expected to come from ore; East Germany - 1955. It is estimated that 12,000 metric tons of refined lead will be produced from scrap each year (1951-1955), the balance, 13,000 metric tons, to be extracted from ore; Poland - 1955. 7/

1951, primary smelter capacity. 15/

1952.

Time indefinite, related to plan.

Stored as pigs. It is estimated that total stocks at the end of 1955 will be approximately 145,500 metric tons.

a. The ned production of primary sinc was 150,000* tons. The ned production of primary sinc was 150,000* tons. The new since refining capacity.

1952.

1952.

1953.

Stored as bars, ingots, slabs, plates and sheets. Estimated stocks and 1955 - 208,600 metric tons.

Estimated range of accuracy, plus 7 per cent or minus 14 per cent. 46/
46/
Planned production was 13,500* metric tons. 46/
17/
1950, planned plant capacity. 46/
Planned capacity for 1955 is 5,000 ingot tons.
Hungary has no magnesium industry at the present time. Plans have been formulated for establishing the industry with an initial capacity of 5,000 ingot tons in 1954, which will be increased to 10,000 tons.

a. Planned production was 110,000 units.
b. Planned production was 60,000 units.
c. Planned production was 83,300 units.
d. Planned production was 82,300 units.
e. Polish and Rumanian planned production for 1955 is 750* and 400* units, respectively. 9/
f. Dast German planned production for 1955 is 12,000* units. 9/

<sup>a. See next table for equivalent 2-axle units.
b. Chinese production of freight cars is believed negligible.
c. The figure for 1910 assumes that all production was of 2-axle units. To convert the physical units shown in the table for the years 1917-1952 to equivalent 2-axle units, subtract 5,500. Multiply the remainder by 2, and add the result to 5,500. This is the reverse of the process used in deriving the physical units shown from a table of 2-axle equivalent units. It is based on the fact that yearly additions to inventory indicate 5,500 2-axle cars per year are produced for Folish use. Additional production is of 4-axle cars for the USSR.
d. 12/
e. Estimated range of accuracy, plus or minus 5 per cent. In addition, 3,310-3,557 narrow-gauge cars were produced in 1950.
f. Planned production.
g. Estimated range of accuracy, plus or minus 9 per cent.
h. Estimated range of accuracy, plus or minus 7 per cent. In addition, narrow-gauge cars were produced as follows: 1951 - 1,290-1,610; 1952 - 735-935.
i. Rulgaria - 1953 12/; East Germany - 1955 12/; Hungary - 1954 12/; Foland - 1955 12/; Rumania - 1955.</sup>

Entire pipelines are recorded for the year in which completed.

Tearly totals include feeder lines as well as connecting and trunk lines.

Pipelines for natural gas and gas from shale oil only.

Pipeline construction in all Satellites is zero or negligible except as indicated. Data are not swallable for Foland and Rumania except as indicated, see footnotes e, f, and g.

Rumanian oil pipeline construction.

Polish gas pipeline construction.

Rumanian gas pipeline construction.

a. Includes telephone central station equipment such as carrier terminals, carrier repeaters, telegraph and teletype equipment, but excludes wire and cable.

b. Satellite production is believed to be equal to approximately 40 per cent of USSR production.

c. Negligible production by Albania, Bulgaria, Poland, and Rumania accounts for 10 per cent of Satellite production.

d. Estimated after allowing 10 per cent of Satellite production for Albania, Bulgaria, Poland, and Rumania.

<sup>a. Data indicated as official probably represent only facilities available for public use.
b. Data are for all of Germany. No East-West breakdown is available. Data for 1928-1929 apparently include telegraph line and wire; data for 1932-1937 include wire and cable used for telegraph and long distance telephones reported to be 667,000 kilometers in 1938.
c. 1927. Data for 1928 are unavailable. It is probable that data represent only facilities administered by the Ministry of Communication.
d. Interurban and international facilities only.
e. Excluding the 9-province long-distance system and South China.</sup>

a. It is probable that data indicated as official represent only telephone conversations handled over public facilities. The estimated range of accuracy for the USSR is plus or minus 7 per cent. The estimated range of accuracy for the Satellites is plus or minus 12 per cent.

b. Interurban and international telephone conversations on state and private systems.

c. Data are for East Germany, excluding Berlin. It is estimated that East German interurban and international telephone calls represented 7 per cent of such calls for all Germany during the period 1947-1951. Figures shown above for the years 1928-1938 were obtained by applying this ratio to data for prewar Germany.

d. It is probable that the data represent only telephone conversations handled over facilities administered by the Ministry of Communications.

<sup>a. Data shown recresent offices available to the public.
l. It is probable that these data represent only facilities operated by the Ministry of Communications.
c. Depot offices are not included: 10,505 depot offices are reported for 1923.
d. Data on depot offices are not available. The number of depot offices is believed insignificant.
e. Depot offices are not included. Available depot office data follow: 1928 - 1,600; 1929 - 1,608; 1930 - 1,584.
f. 1924-1938, prewer Germany: 1948-1950, West Germany only. Available data indicate that, in addition, there were the following depot offices: 1928 - 1,603; 1929 - 1,101; 1929 - 1,101; 1930 - 3,101.
g. Apparently, depot offices are not included in data for 1928 and 1929. Available data indicate that there were approximately 10,000 depot offices in 1925 and 1920.</sup>

a. It is probable that these data represent only telegrame handled over public facilities. The estimated range of accuracy of data for the USSR is plus or minus 10 per cent. The estimated range of accuracy for the Satellites is plus or minus 15 per cent.
 b. Data for 1928-1935 probably represent only telegrams handled by facilities operated by the Ministry of Communications.

a. Up to and including 20 mm.

b. Figure includes only rifles and pistols.

c. 5/

d. All over 20 mm. unless otherwise indicated.

e. Data include artillery 75 mm. and over. The figures are for a World war II year, not necessarily 19kk.

f. Data include artillery 75 mm. and over.

g. 5/ Including tank guns and assault guns, 22,500 pieces were produced in 1952.

h. Assembly only.

i. Data include 20 mm. and under. Estimated range of accuracy, plus or minus 50 per cent.

j. It is estimated that artillery ammunition was produced during 1952 in the following types and quantitiee: 155 mm. to 305 mm. - 255,000 rounds;

mm. to 122 mm. - 11,745,000 rounds. The estimated range of accuracy is plus or minus 50 per cent.

45

a. This figure is for a World War II year, not necessarily 1944.

b. These CIA estimates are higher than the 6,000 current production estimate carried by G-2. 5/

c. 1951. CIA figures are for CISSI produced tanks and assault curs in the Eloc as of 31 December 1951. No estimate has been made concerning their distribution. G-2 figures are all from the same source. 5/

d. Included in this figure are 565 tanks which were not manufactured in the USSR. They are old tanks produced in wartime Germany, the US, and other non-Bloc countries. 5/
